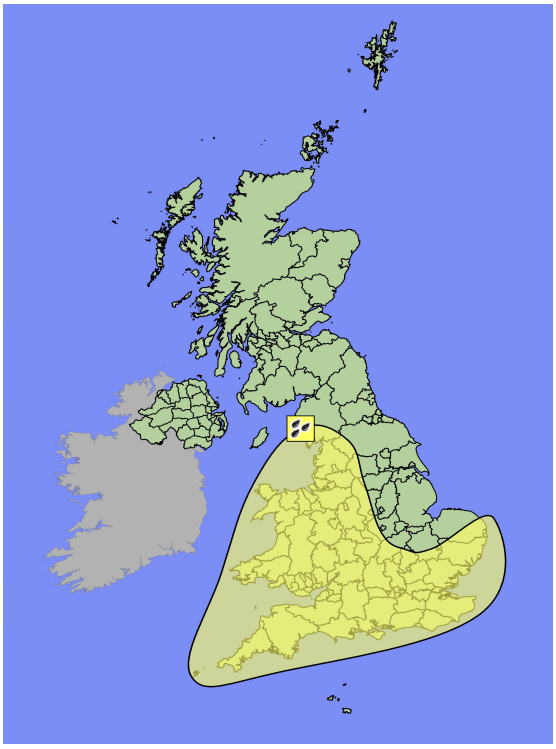
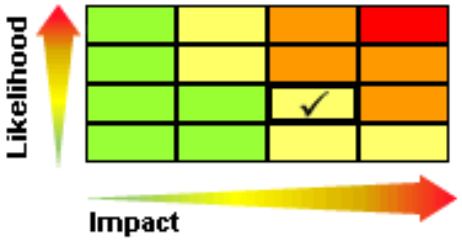
National Severe Weather Warning Service





Chief Forecasters Assessment
The deep depression currently affecting the UK will drift southwards and is expected to be centred near or over southwestern Britain by midday Wednesday, bringing further showers or longer spells of rain to many regions. There is a risk of further large rainfall totals accumulating across some areas, in particular over parts of Wales and southern England. Here there is the potential for local accumulations of 20-40 mm. There remains uncertainty about exactly where the heaviest rain will occur and some areas will miss the worst of the rain. After the recent wet weather, this further heavy rain could cause localised flooding.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **00:00 on Wed, 26th Sep 2012** until **23:59 on Wed, 26th Sep 2012**

Further heavy rain or showers will affect many parts of Wales and western, central and southern England during Tuesday night and Wednesday. The rain will ease away from northern England early on Wednesday,

The public should be aware of the risk of localised flooding.
